TEXTBOOK OF AGRICULTURAL STATISTICS · CHAPTER 2

5-MINUTE REVISION

Official Agricultural Statistics

From the chapter's own revision points, formulae and questions.

BOOK-ONLY EDITION · Verified against the textbook

Selected from Chapter 2 · Chapter Summary in the textbook.

Textbook authors: **Dr. Pratheesh P. Gopinath · Dr. Adarsh V.S. · Mohammed Hisham M. · Dr. Manju Mary Paul**

Quick revision · 1

- Crop production combines an area estimate and a corresponding yield estimate.
- CCE plots must be selected by the prescribed sampling procedure, not by convenience.
- Plot yield requires the net produce weight and the actual harvested area.
- Villages, fields and experimental plots can form successive sampling stages.
- Official estimates should be quoted with their reference year and release status.

Quick revision · 2

- The Agricultural Census describes operational holdings.

Important formulae

Diagonal of a square CCE plot:

$$AC = BD = \sqrt{5^2 + 5^2} = 7.07 \text{ m}$$

Diagonal of a square of side a:

$$d = a\sqrt{2}$$

Self-check from the chapter

1. Crop production is estimated by multiplying crop area by average crop _____. **[Yield]**
2. The field procedure used to estimate crop yield is called a crop _____ experiment. **[Cutting]**
3. The full form of CCE is _____. **[Crop Cutting Experiment]**
4. The full form of GCES is _____. **[General Crop Estimation Survey]**
